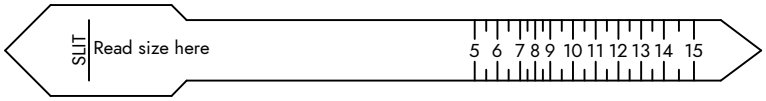
SEBASTIAN CILENTO JEWELRY

This page must be printed at 100% for accurate size measurement.

Set up the page scale to 100% or actual size in your printer settings. Check with a ruler that the 100mm line on this printed page is exact. Sizes using this page are considered approximate and may need to be re-adjusted.

RING SIZER STENCIL



METHOD:

- To make the ring sizer more stiff and easier to use, stick a strip of clear tape over the stencil - tape both sides
- With a pair of scissors or blade cut out the stencil of the ring sizer and use a blade to cut the SLIT - the pointed end will need to pass through the slit
- Wrap the ring sizer around your finger between the base and first knuckle with the numbers facing outward and insert the pointed end through the slit
- Wrap it tightly. For the sizer to be accurate it needs to be pulled tight - not overly tight but a little tighter than you would normally wear the ring
- Avoid wrapping the sizer right up against the base of the finger - for many hands the finger is much thinner at this point which can throw the size off. Wrap it around the flesh in the middle of the finger bone where the ring will typically sit and pull it through until it becomes tight - measuring at this position on the finger is especially important for wider bands
- Make your measurement with the strip pulled tight and with the fingers sitting naturally together - Do not spread the fingers apart as this can increase the apparent ring size
- The number that lines up with the slit will be your **US ring size**
